

FRESH FILTERED DRINKING WATER ON TAP

-  **Does your tap water taste terrible?**
-  **Does it smell so bad you can't drink it?**
-  **Do you hate the limescale in the kettle?**
-  **Are you fed up with filter jugs?**
-  **Do you want a less expensive alternative to bottled water?**

The **Drink-King** domestic water filtration system provides fresh filtered water on tap whenever you need it. With a **Drink-King** undersink filtration system fitted in your kitchen, you will never need to buy expensive bottled water again. If you currently use a filter jug, you are bound to find the **Drink-King** far more convenient and economic.

Drink-King is a high quality cartridge based filtration system that is simple to fit, requiring no plumbing skills, convenient to use and inexpensive to run. There is a choice of interchangeable cartridges that meet most needs and we remind you when the cartridge needs replacing.

Please remember that your local tap water should be perfectly safe to drink untreated and the amount of metallic and other substances in the water should fall well below the maximum amounts allowed under EC law. The **Drink-King** undersink water filter can make a substantial difference to the taste and smell of the water.

The **Drink-King** Cartridge options are:

Bronze: Incorporates a premium blend of granular activated carbon (GAC) which absorbs free chlorine and other organic chemicals, thus removing unpleasant odours and tastes. This cartridge should be replaced every six months because of the risk of bacteria build up within the filter after the chlorine has been removed.

Silver: Very similar to the Bronze cartridge but with the addition of metallic silver which acts as a biocide to inhibit bacterial growth. This means that the life of the cartridge can be safely extended to twelve months.

Gold: A "Multi Media" filter incorporating a range of materials to produce different levels of filtration. The water first passes through a polypropylene filter which removes coarse particles of dirt, sediment and rust held in suspension. It then moves through a powdered activated carbon (PAC) briquette with a special media which is active against both suspended and dissolved lead. The PAC briquette also absorbs certain pesticides and traps Cryptosporidium and Giardia cysts. The life of the cartridge is up to twelve months. (This unit is especially recommended where lead pipes are close to a Water-King electronic water softener).

Scale Reducer: A multi-purpose cartridge containing food quality polyphosphate crystals, which reduce scale formation in the kettle and other cooking utensils. Like the Bronze, it utilises GAC to remove tastes and odours and a polypropylene filter like the Gold to remove dirt sediment and rust. The life of the cartridge is between six and twelve months, depending on the hardness of the water.

Drink King

Fresh Filtered Drinking Water on Tap

Water Fountain

Long-reach drinking water tap fitted through sink or worktop

Metal Kitchen Sink

Kitchen sink or worktop. (Requires 11mm hole to be drilled).

-  Removes unpleasant taste and odour
-  Filters out dirt, rust and sediment
-  Reduces lead and cryptosporidium
-  Inhibits bacterial growth
-  Easy DIY installation
-  Cheap to run
-  No more bottled water!

Blue Filtered Water Tube

Simple to install push-fit tube.

110mm

Drink King
Fresh Filtered Drinking Water on Tap

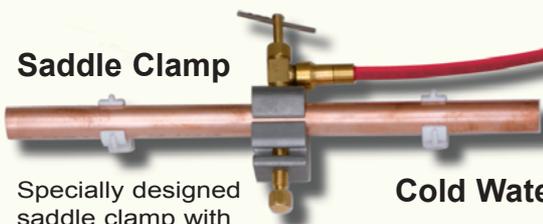

330mm

Filter Fixing Bracket

To install the filter in the cupboard under the sink.

Filter Housing

"Screw on" filter housing that will take a wide range of disposable filter cartridges with a life of between six and twelve months.

Saddle Clamp

Specially designed saddle clamp with pipe piercing system and shut-off valve for pipe size 15mm

Cold Water Pipe to Kitchen Tap

Red Unfiltered Water Tube

Easy To Fit Replacement Cartridge
