

Diamond Facilities Support secures Atkins Global contract

Diamond Facilities Support are fast emerging as a trusted partner for facilities management and support services after securing a three year nationwide contract with one of the world's leading design, engineering and project management consultancies, Atkins Global.

The Atkins contract was awarded after Diamond Facilities Support clearly demonstrated their unique, innovative and efficient approach to facilities management. They are providing all planned M&E maintenance visits nationwide,

delivering reactive maintenance and quoted works to the Atkins office estate.

Adam Atkins, director, Diamond Facilities Support, said, "The partnership with Atkins is an excellent contract for us and is reward for the pioneering approach we have taken in managing the maintenance requirements of all our clients."

Helen Cooper, director, Diamond Facilities Support, added, "The facilities management industry is highly competitive, yet we continue to win work by demonstrating innovative, unique and best practice methods that are proven amongst our expanding client-base."

Pram innovation enhances family friendly reputation

'Buggy Lock' a new security system has been launched by safety and security specialists Cardea Solutions, offering family-friendly facilities a low-cost, easy-fit solution to prevent the growing problem of buggy theft. Introduced to the UK market in summer 2014, the product was unveiled by the security firm as latest police statistics indicated a rise of almost 25% since 2010 in pram theft, costing insurer's £70m per year. The wall-mounted product aimed at leisure centres, tourist attractions and holiday parks, incorporates renowned Ojmar locking technology as part of a

robust coin operated mechanism, giving parents and carers' peace of mind that their valuable buggy is completely secure when out with young families.

"Organisations have an opportunity to demonstrate leadership in customer care and to attract families by installing Buggy Lock", said Paul O' Carroll, Managing Director of Cardea Solutions.

Superb quality of turnout

Over 2,000 energy and environment professionals attended the launch of UBM Live's Energy & Environment Expo at London ExCeL, Jun 17-19. An impressive 10% of attendees were from overseas, with a strong turnout from Europe and the Far East.

Attendees included the great and the good from across the industry including pertinent representatives from London Underground, McDonalds, Iceland Foods, EDF Energy, Rolls Royce, Dong Energy, NHS Property Services, Schlumberger, Dyer & Butler, Data Techniques, ENER-G, Panduit, The Crowne Estate, Hitachi, Aston Martin, Paypoint, Camborne Capital, Atkins & Unilever.

All in all, a strong mix of suppliers including manufacturers, software providers and waste treatment companies were present. Alongside were a healthy mix of end users, specifiers and influencers: estate managers, civil engineers, retailers, diplomatic and foreign government representatives, academics and management consultants. The show, dedicated to energy and resource management in buildings,

was part of the Protection & Management Series 2014. Show organisers recorded a strong influx of visitors into the exhibition from the co-located events of IFSEC International, FIREX International, Facilities Show, Safety & Health Expo and Service Management Expo.

The Expo returns to ExCeL in 2015 from 16-18 June. This is our first pick of the best exhibitors from this year's show, listed here in alphabetical order: Camfil, IEMA, Lifescience Products, Roseville Energy. More details can be found below.

Energy & Environment Expo Review Top 10

Urgent action needed to fill sustainability skills gap

By 2020 the world economy could be facing a perfect storm in the form of a supply deficit, driven by population growth, increasing demand for natural resources and soaring costs of energy. These issues are combining to significantly challenge the success of the global economy.

The transition to a sustainable economy presents significant opportunities for business – yet, according to recent IEMA research, only 13% of companies are fully confident that they have the skills to successfully compete in the sustainable economy.

"Businesses need to urgently turn what is a growing list of challenges into opportunities. The most effective way of doing this is by ensuring that all businesses have access to a new set of skills – environment and sustainability – to ensure that businesses globally can survive," said Tim Balcon, CEO of IEMA.

IEMA's research shows that many businesses lack the skills to capitalise on the opportunities, which is why IEMA is proposing a new skills framework for

businesses everywhere. The framework – supported by a range of tailored training products from IEMA Sustainability Training Solutions – outlines the skills needed for business leaders, environment & sustainability professionals, school leavers – essentially, the entire workforce.

Innovative energy monitoring & metering

Roseville Energy specialises in energy metering and monitoring solutions for the public sector, monitoring electricity, water and gas.

Where does it start? The best way to begin is with a one week Periodic Energy Assessment (PEA). A PEA is a unique approach to energy reduction, in that it begins with the energy supply before the meter.

Roseville's PEA compares the supplier invoiced energy consumption to what you have actually used, identifying savings opportunities and presents the information in a clear way, allowing you to make informed decisions on future investments. The PEA provides you

Roseville
ENERGY

with metering errors and can assist you with claim back rebates.

Roseville's PEA is easy and quick to set up and doesn't disrupt your power supply and uses GPS/GPRS/WI-FI communication technology, so doesn't interfere with your company software.

It works on the cloud and you can log in via a secure online portal to view the results of your assessment. All reporting is available on all devices and there is no limit to further expansion.

Getting physical with hard water

Technological advances in the water treatment industry have led to an increase in alternative technologies as replacements to more traditional hard water treatments. Physical water conditioners (PWC) are now widely accepted as a low cost, easy to install and, in some cases, maintenance free alternative to salt based softening. But with so many PWC available and no official UK standard by which to judge them, how can effective treatments be identified?

Lifescience Products Ltd has established a reputation as experts in this field. Their research, conducted over twenty years, shows that all water conditioners are not equal – even products that look alike can be very different!

Their market leading Water-King is

unlike other 'similar' technologies in that it is able to continuously treat water by generating ultra-high radio frequencies that travel in both

directions, upstream and downstream. Alternative technologies, that treat water locally, must rely on a memory effect to prevent scale encrustation downstream of the device.

Deploying Water-King tactically, downstream of pumps and storage tanks that can interrupt its signal, will ensure that all the water is treated all the time regardless of flow. This unique characteristic allows Water-King to protect sites with long periods of low or intermittent usage such as schools, universities and, increasingly, multi-occupancy high rise buildings.

If you'd like to learn more about Water-King or have any queries, please contact Darren Stacey, Head of Sales & Marketing, on: darren@lifescience.co.uk or call the technical hotline on 01608 811707.

World leader in providing air filtration solutions launches new website

Camfil UK, the world leader in providing air filtration solutions for maintaining healthy and comfortable indoor environments, has launched a new Air Cleaner website to showcase their range of products for the domestic, commercial and industrial sectors.

The new site is dedicated to the CamCleaner which is a range of patented air cleaners with the most efficient HEPA filters on the

market. They are designed to work as a supplement to existing ventilation systems or as a stand-alone air cleaner where no HVAC systems are in place. They deliver reduced energy costs, more efficient production and a healthier work environment with less dust and fewer harmful particles.

CamCleaners provide a number of health benefits and advantages including:

- Healthier employees
- Less cleaning
- Lower energy costs
- Reduced environmental impact
- Clean products, fewer operational disruptions

The informative new portal will provide subscribers with the freshest insights & unlimited access to exclusive content including: datasheets, thought leadership pieces, industry news articles, whitepapers & case studies.

Camfil Air Cleaners are suitable for use within a broad range of sectors including:

- Healthcare
- Commercial
- Warehousing
- Education
- Residential
- Museums
- Manufacturing
- Laboratories
- Automotive
- Recycling
- Leisure/hotels
- Food & beverage
